ABSTRACT:

Environmental Education refers to organized efforts to teach about how natural environments function and, particularly, how human beings can manage their behavior and ecosystems in order to live sustainably. The term is often used to imply education within the school system, from primary to post-secondary. However, it is sometimes used more broadly to include all efforts to educate the public and other audiences, including print materials, websites, media campaigns, etc. Related disciplines include outdoor education and experimental education. Environmental education is a learning process that increases people's knowledge and awareness about the environment and associated challenges, develops the necessary skills and expertise to address the challenges, and fosters attitudes, motivations, and commitments to make informed decisions and take responsible action. Environmental education focuses on: Awareness and sensitivity about the environment and environmental challenges. Knowledge and understanding about the environment and environmental challenges, Attitude concern for the environment and help to maintain environmental quality, Skills to mitigate the environmental problems and Participation for exercising existing knowledge and environmental related programs.

Key words: *environmental, education, technology, conservation*

INTRODUCTION

Environmental Education (EE) is a methodology in which people pick up familiarity with their surroundings and secure learning, abilities, values, experiences, and passion, all of which will empower them to act – separately and aggregately – to take care of present and future environmental issues. It is the study of relationships and interactions between natural and human systems. In short, environmental education is provided so that people can have a better understanding of the world around them and know how to take care of it properly so that the world can be a better place. Environmental education is a process that allows individuals to explore environmental issues, engage in problem solving, and take action to improve the environment. As a result, individuals develop a deeper understanding of environmental

issues and have the skills to make informed and responsible decisions.

Environmental education is a complex field, and it covers a variety of different topics that are related to the environment. It even has some aspects of engineering in it, which means that a person can even start to understand how they can play a role in environmental engineering. Environmental education furnishes individuals with the mindfulness required to build up organizations, comprehend NGO exercises, create participatory methodologies to urban planning, and guarantee future markets for eco-business. All of these are not only good for the environment, but they will also end up being very good for the economy as well, so everyone gets to benefit from the efforts of those who are going through environmental education. EE is taught in schools, communities and centers like parks, zoos and museums.

FEATURES OF ENVIRONMENTAL EDUCATION

1. Is a learning process that expands individuals' information and mindfulness about nature's domain and related difficulties, creates the vital abilities and mastery to address the difficulties, instills confidence and stewardship and cultivates demeanor, inspirations, and responsibilities to settle on educated choices and make dependable moves in the field that they are working with.
2. Is an inter-disciplinary field that integrates fields such as biology, ecology, earth science, geography, atmospheric science and mathematics because understanding how the environment works and keeping it healthy requires knowledge and skills from many disciplines.
3. Includes all efforts to make the general public aware of the knowledge of the environment and environmental challenges through print materials, media, brochures, bulletins, videos, or other media techniques.
4. Leads to responsible individual and group actions.
5. Provides information about specific environmental concerns or problems to the general public instead of specific group, religion or community.
6. Works to help you think critically so that you aren't sitting there trying to fit everything into a neat little box.
7. Involves students in different data-gathering techniques that help them to discuss, analyze, predict and interpret data about environmental issues.
8. Is study centered, promotes higher-level thinking skills and relevant to student's everyday lives.
9. It allows people to discuss complex environmental problems that have no simple answers.
10. It is a process in which individuals gain information about environmental awareness and acquire knowledge, skills, values, experiences, and determination, which can help them to solve different environmental problems.
11. Environmental education is a holistic subject, and the development of a student can be best ensured if enough scope is given to them to apply the learned principles in real life.
12. It is a subject that involves a lifelong process. Since the environment is constantly evolving with every passing day or year, Environmental Education also has to improve and develop to keep up the pace so it can eventually help the environment a little better.
13. Just as its name suggests, Environmental Education is not merely a theoretical aspect. It is an education as a whole. In fact, in the truest sense, Environmental Education is a holistic approach to education.
14. Environmental Education is an interdisciplinary approach. It includes and integrates all possible streams to make the helping of the environment an overall process.
15. The beauty of Environmental Education is that it considers all the aspects of the environment. From the social, the political, the economic, the aesthetic, the spiritual, as well as the moral. No environmental aspect is too minor to be considered. It saves and protects the environment as and when required.
16. One of the greatest features of Environmental education is its adaptability. As the environment changes, certain principles of this subject could adapt and evolve to support the change. Environmental Education is and will always be there for the environment.
17. Environmental Education is an interdisciplinary approach. It includes and integrates all possible streams to make the helping of the environment an overall process.
18. The beauty of Environmental Education is that it considers all the aspects of the environment. From the social, the political, the economic, the aesthetic, the spiritual, as well as the moral. No environmental aspect is

too minor to be considered. It saves and protects the environment as and when required.

19. One of the greatest features of Environmental education is its adaptability. As the environment changes, certain principles of this subject could adapt and evolve to support the change. Environmental Education is and will always be there for the environment.
20. Environmental ethics are always at the forefront of this subject. This is a subject that prioritizes the ethical treatment of all natural elements, no matter how small it is.
21. Environmental Education encourages the active participation of everybody. It is only through everybody's involvement that we would be able to serve the environment better.

By being passionate about keeping the world around them safe, people will be more likely to apply their particular education to what they are doing, and they will work to take care of the world around them while they are building their company or organization up. Environmental instruction upgrades basic analysis, critical thinking, and compelling choice-making abilities, and instructs people to weigh different sides of an environmental issue in order to settle on educated and capable choices. Environmental education does not advocate a specific perspective or game plan; instead, it allows you to make your own choices.

In short, it will help you look at any situation that you may be in, and it will assist you in being able to make a decision that is beneficial for the environment. With a background in environmental education, you will have the environment at the forefront of your mind, so whatever plan you end up making, you will be able to adapt it so that it is more environmentally friendly and savvy.

COMPONENTS OF ENVIRONMENTAL EDUCATION

There are a number of different parts attached to environmental education. The most common segments

of environmental education that you will come across during your studies can include the following:

1. Awareness and Mindfulness: Mindfulness and affectability to nature's turf and environmental difficulties that you may encounter as a result of being in the corporate sector today.
2. Knowledge and Learning: Learning and understanding of nature and environmental difficulties that are holding people back and/or causing the world to change in negative ways.
3. Attitudes: Disposition of sympathy toward nature's domain and inspiration to enhance or keep up the environmental quality, which will spill over into any plans that you make or anything else that you do that is related to the organization that you currently are working in or developing.
4. Skills: Aptitudes to recognize and help resolve environmental difficulties in a practical manner that matches up with the current trends and technologies that are out there today.
5. Participation: Investment in programs and projects that help reduce the effect of environmental difficulties, thereby making sure that the money you're investing is going to help the environment instead of harming it.
6. Promotion of Green Facilities: Making the green initiatives popular and also providing the required infrastructure to help out with the development of several environmental aspects. Promotion of green facilities like a self-sustainable kitchen or even a self-sustaining school could be promoted to boost awareness among the public as well as to help with the promotion of better environmental relationships.

CONCLUSION

So, environmental education is actually an incredibly important part of running a business, company, or organization. Without this vital component, companies would be a lot more reckless with natural resources and/or the land that they are using in order

to move their company forward. It empowers an individual, community, organization to enhance their decision-making skills by weighing various sides of an issue and not advocating a particular viewpoint or action. With environmental education, you can be sure

that your staff will be more mindful of the environment around them and that they will be savvier when it comes to making plans that are more environmentally friendly and beneficial.
